

## Instructions for Alexandro:

### 1. Survey: Semi-annual QoC CR Rumphi District WASH Fit survey

There are already some different pages in a console for this survey. The console is called WASH – FIT Malawi Results.

I am looking for a new page that shows a chart with each HCF and the overall score for that facility, over time. So you can see for each facility how the overall score has changed over time. All the facilities would be on the chart – each one would have its own colour.

### 2. Survey name: Quarterly QoC CR WHO Handwashing Observation. There is currently one console for this survey – Hand Washing Observation Report. I'd like to add another page that would show (if possible!):

- a. For a selected date range (it would be awesome if the report would allow the user to select what the date range is)
- b. The average score – the total of all the numerators for that date range, divided by the total of all the denominators for that period to give an average percentage
- c. For all of the reporting facilities

This could be a bar chart that has the score as the y-axis and the facility by name on the x-axis

### 3. Survey name: Waste Management quarterly Review Assessment. This is a duplication of the excel spreadsheet that I sent you. I am looking to provide the bar charts and other data shown on the first two sheets of the excel spreadsheet, in a console. All the needed data should be in the survey already.

### 4. Survey name: Weekly Facility Rumphi District HCF Monitoring. This is a report that is completed every week by each HCF participating in this program. In section 10.4 (Section 10 is titled “Details of problems”) the question is: Is this a problem that needs Technical Circuit Rider support?

If the answer to this is “Yes”

And the answer to the next question: Has the Technical Circuit Rider been informed?” is “No”

is it possible for this to trigger a notification to a selected person? The notification could be by SMS, by WhatsApp or by email – whatever makes sense.

If this doesn't already exist within the mWaster system, what would it cost to program it?

I've added you as an admin to the DRI-TI organization.
